

# Boise Airport

BOISE, IDAHO, USA

## Airport Layout Plan Review

This work began in January 2004 as a preparatory planning exercise in advance of the Airport Master Plan Update scheduled to begin in late 2004. In January, May and June 2004, senior airport staff held facilitated meetings to review the airports development needs, capital improvement plan and issues related to the upcoming Airport Master Plan Update.

The work involved a comprehensive internal review of the airports' future growth and a review of the interrelationships and staging of work elements to accommodate development while focusing on internal methods for project development and tracking. CPI facilitated and prepared drawings for the meetings. CPI's deliverable product was a report for use by and as background materials to master planners for use in preparing proposals to the Boise Airport's Master Plan Update RFP.

The work was conducted between January and July 2004.
